

# Function Composition - Explore

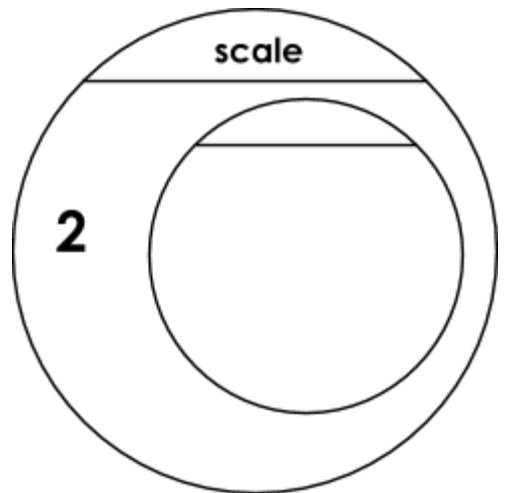

You'll be investigating these new functions with your partner:

```
scale :: Number, Image -> Image  
rotate :: Number, Image -> Image  
flip-horizontal :: Image -> Image  
flip-vertical :: Image -> Image
```

Draw a Circle of Evaluation and write the code to create a text image of your name.

Try out the `scale` function. Fill in the missing information with your Circle of Evaluation from above, then write the code.

Test your code - What does scale do?

---

Try out `rotate`, `flip-horizontal`, and `flip-vertical`. Use the space below to write your code, then test out your code in Pyret when you're ready.
