

# Function Composition - Explore

You'll be investigating these new functions with your partner:

```
; scale: Number Image -> Image  
; rotate: Number Image -> Image  
; flip-horizontal: Image -> Image  
; flip-vertical: Image -> Image
```

Draw a Circle of Evaluation and write the code to create a text image of your name.

Let's try the `scale` function first! Fill in the missing information with your Circle of Evaluation from above, then write the code.

Test out your code in WeScheme! What does `scale` do? \_\_\_\_\_

Now, let's **rotate** the image of your name. Use the space below to write your code, then test out your code in WeScheme when you're ready.
